

Global Sales & Logistics Performance Analysis Report

Executive Summary

This report evaluates sales, profitability, logistics, payment performance, and regional operations based on the provided Power BI dashboards.

Key KPIs

Revenue: 2.96M

Profit: 1.25M

Cost: 1.71M

YoY Revenue Growth: 34.65%

Shipping Cost: 49.13K

Shipping Cost Ratio: 1.66%

AOV: 745.87

Main Findings

- Strong annual revenue growth indicates healthy business expansion.
- Operating costs remain relatively high, limiting profit potential.
- Significant performance differences exist across countries and cities.
- Cash on Delivery remains a notable payment method, increasing operational risk.
- Refund rate (9.59%) is relatively high and requires investigation.
- Shipping efficiency varies considerably between countries.

Business Problems

1. High operational costs.
2. Uneven profitability across regions.
3. High refund rate.
4. High shipping cost in some countries.
5. Low-performing cities.
6. Heavy dependence on a limited number of markets.

Recommendations

- Optimize supplier contracts and procurement costs.
- Improve inventory planning and demand forecasting.
- Reduce shipping costs through route optimization and regional warehouses.
- Encourage digital payments using promotions and loyalty rewards.
- Investigate refund causes and strengthen quality control.
- Launch targeted marketing campaigns for low-performing cities.
- Expand into new geographic markets to reduce concentration risk.

Expected Business Impact

- Increase profit margin.
- Reduce refund rate below 5%.
- Lower shipping cost ratio below 1.5%.
- Improve customer satisfaction and logistics efficiency.
- Support sustainable revenue growth.

Conclusion

The dashboards show a business with strong sales growth but clear opportunities to improve operational efficiency, logistics, and profitability. Implementing the recommended actions can significantly improve financial performance and customer experience.
